

Vladyslav Nikitin

FULL-STACK DEVELOPER

PROFILE

Full-stack developer building high-performance websites and web applications — from bespoke landing pages to large-scale corporate platforms, with deep specialization in e-commerce ecosystems. I bridge frontend design and backend logic so every project ships fast, secure, and scalable.

FOCUS

Frontend — React, Next.js 15 (App Router), TypeScript, Tailwind

Backend — PHP, Node.js, GraphQL, REST integrations

Commerce — WooCommerce, Shopify, payment gateways

Architecture — Headless WordPress, CRM & event tracking

EXPERIENCE

Full-Stack Developer

Nov 2023 — Apr 2026

[Foxes](#) · Remote

- Built dynamic interfaces and landing pages in React & Next.js, wiring APIs into data-driven components and forms.
- Designed and deployed end-to-end e-commerce stores on WordPress/WooCommerce and Shopify.
- Developed secure custom payment solutions and third-party API integrations that streamlined checkout flows.
- Architected CRM tracking systems with event-based integrations for customer-journey analysis.
- Mentored developers, defined technical standards, and improved internal development workflows.
- Used AI tooling to accelerate delivery, optimize code, and ramp quickly on unfamiliar APIs.

WordPress Developer

Mar 2023 — Jun 2024

[NextG](#) · Remote

- Designed and shipped landing pages to client requirements, end to end.
- Translated customer needs into technical solutions and led requirement analysis.
- Collaborated with cross-functional teams on new features and improvements to existing ones.

Front-End Developer

Apr 2022 — Mar 2023

[Remote Helpers](#) · Remote

- Developed WordPress web applications for the recruitment domain.
- Maintained and enhanced company websites alongside the product team.
- Built a strong foundation across frontend and backend, delivering clean, functional designs.

HTML Coder

Feb 2021 — Mar 2022

[Aweb Systems](#) · Office

- Created website layouts for WordPress, Joomla, Bitrix, and ModX.
- Improved designs and ran SEO optimizations that lifted site performance and visibility.

Headless WordPress & Next.js Commerce Platform

In progress

Next.js 15 · React · TypeScript · GraphQL / Apollo · Tailwind CSS · WordPress + WooCommerce

- Engineered a headless CMS architecture: Next.js 15 App Router frontend against a decoupled WordPress/WooCommerce backend.
- Used GraphQL with Apollo Client for precise queries, cutting payload sizes and improving load performance.
- Applied React Server Components for faster server rendering, with Turbopack for a fast development loop.
- Enforced strict TypeScript interfaces across complex product and category data to prevent runtime errors.
- Built a mobile-first UI in Tailwind CSS, and a Linux-based workflow on WSL 2 (Ubuntu) for environment parity.

Task Manager — Kanban Board & Time Tracker

Open source · MIT

TypeScript · React · Cloudflare Workers · D1 (SQLite) · JWT · @dnd-kit — github.com/Naykitin/task-manager · [live demo](#)

- Self-hosted Kanban board with built-in time tracking and timesheet reporting, running entirely on Cloudflare's free tier at \$0 hosting.
- A single Cloudflare Worker (TypeScript) serves both the React app and every /api/* route — no separate backend.
- Cloudflare D1 (SQLite) storage with PBKDF2 password hashing and signed JWT sessions in HttpOnly cookies.
- Drag-and-drop board (@dnd-kit) with per-task timers, a timesheet view, and CSV export.
- MIT licensed and built to be forked, so anyone can adapt it to their own workflow.

SKILLS

Frontend

HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Elementor

CMS & E-commerce

WordPress, WooCommerce, Shopify, Bitrix, ModX, Joomla

Backend

PHP, Node.js, REST API integration, GraphQL, Apollo Client

Tooling

Git, CI/CD pipelines, WSL 2, Gulp, CRM integration, SEO optimization

Leadership

Team management, task assignment, mentoring and onboarding, technical standards

EDUCATION

MSc, Mechatronics, Robotics & Automation Engineering

Sep 2018 — Dec 2022

[Kharkiv National University of Radioelectronics](#)
